

EZE FAVOUR CHIMEREZE

FULL STACK SOFTWARE ENGINEER | PRODUCT BUILDER | FOUNDER, CODEWITHFRED

Lagos / Port Harcourt, Nigeria • ezeavourchimereze@gmail.com • 0704 164 1821
codewithfred.name.ng • github.com/Code-With-Fred • linkedin.com/in/eze-favour-chimereze

PROFESSIONAL SUMMARY

Full stack software engineer and independent studio founder with a track record of shipping web and AI powered products for real businesses across Nigeria. Core strength is turning a business problem into a working, revenue generating system: client discovery and pricing through architecture, build, and launch. Comfortable owning the full lifecycle of a product, including client acquisition, technical delivery, and post launch support. Hands on experience with React, Next.js, TypeScript, Tailwind CSS, Node.js, Supabase, and the Anthropic Claude API, applied across SaaS platforms, booking systems, fintech tooling, AI agents, and institutional software proposals. Combines engineering skill with commercial judgement: pricing projects, closing clients, and building tools meant to scale.

CORE COMPETENCIES

Frontend: React, Next.js, TypeScript, Tailwind CSS, responsive and config driven UI systems

Backend: Node.js, REST API design, serverless functions, PM2 process management

Data & Infrastructure: Supabase (Postgres, auth, storage), MongoDB, Vercel deployment

Payments: Stripe, Paystack integration for subscriptions and one off checkout flows

AI & Automation: Anthropic Claude API integration, AI agent design, prompt engineering, retrieval and workflow automation

Product & Delivery: MVP scoping, technical proposal writing, milestone based pricing, client facing demos

Tooling & Ecosystem: Git and GitHub, Figma, Cloudinary, Zoho Books API, Apollo.io, Canva, Google Workspace

Business Skills: Client acquisition, cold outreach, financial reconciliation, pricing strategy, contract negotiation

PROFESSIONAL EXPERIENCE

Founder & Full Stack Engineer — CodeWithFred

2025 – Present

Lagos / Port Harcourt, Nigeria (Remote, client engagements across Nigeria, UK, and UAE)

Independent software studio building custom web applications, AI powered tools, and business systems for SMBs and institutional clients. Own the entire delivery pipeline: lead generation, technical scoping, pricing, architecture, development, and post launch support.

WhatsApp AI Lead Qualification Agent (ChatPilot)

- Designed and built an AI powered WhatsApp agent that automatically qualifies inbound leads for small businesses, using Node.js, the Anthropic Claude API, and Supabase for conversation state and lead storage.
- Deployed the agent as a long running process using PM2 for reliability and uptime, then productized it into a standalone offering, ChatPilot, with a public facing landing page deployed on Vercel.
- Positioned the product for SMBs that receive high WhatsApp inquiry volume but lack the staff to triage leads quickly, directly targeting a measurable business outcome (faster response time, higher conversion).

Med Spa & Aesthetics Client Acquisition and Booking Platforms

- Built a demo led, WhatsApp first client acquisition motion targeting med spas and aesthetic clinics across Lagos and Port Harcourt, combining outbound outreach with a working product demo as the pitch.
- Engineered a configuration driven booking demo architecture (a single CLINIC config object) that allows a fully branded, functional booking site to be re skinned for a new clinic in a fraction of the time of a rebuild, used to win Ceendy Spa Aesthetics and Luxe Aesthetics as clients.
- Progressed Luxe Aesthetics into a warm opportunity for a five brand platform build, expanding a single clinic engagement into a multi brand SaaS style opportunity.

- Ran outreach and follow up sequencing using Gmail integration and AI assisted messaging to keep a live pipeline of prospects moving toward close.

Institutional Software Proposal — Unified Student Portal, University of Port Harcourt (UNIPORT)

- Authored and delivered a full institutional contract proposal for a Unified Student Portal, including plagiarism and AI generated content detection, for the Department of Journalism at UNIPORT.
- Structured the engagement with phased milestones and pricing between ₦2.2M and ₦2.95M, demonstrating the ability to scope, price, and pitch a large institutional software contract, not just build to spec.

Financial Systems & Business Consulting — Sano Junior Chefs and FoodArena

- Provided ongoing business and technical consulting to two Nigerian companies, Sano Junior Chefs and FoodArena, focused on financial data integrity and reporting.
- Performed bank statement reconciliation and produced Zoho Books CSV exports to clean up and structure historical financial records.
- Wrote Python scripts against the Zoho Books API to apply bulk transaction categorization rules, removing hours of manual bookkeeping work per cycle and improving the accuracy of financial forecasting.

Crypto Portfolio Tracking SaaS (In Development)

- Architecting a crypto portfolio tracking SaaS on React, TypeScript, and Supabase, with Stripe and Pystack for subscription billing across international and Nigerian customers.
- Defined the product scope and compliance approach independently, from data model through billing, ahead of a planned beta launch.

Additional Client & Product Builds

- Captain Black Global Services: shipped a luxury catering website with a custom admin CMS for managing menus, bookings, and content without developer involvement.
- Vistana Hotel Concierge: built an AI powered hotel concierge demo to showcase conversational booking and guest service automation to hospitality prospects.
- Football Predictions Platform: designed the Supabase schema, integrated Pystack for monetization, and built an AI prediction engine on the Anthropic API to generate and serve match predictions.
- Scripture Projection Desktop App: built a church scripture projection tool in Electron and React with a custom KJV search and display engine, architected for future SaaS productization to churches.
- Built outbound client acquisition motion from Instagram DM outreach targeting restaurants and SMBs in Ghana and Nigeria into structured cold email campaigns across Lagos, London, and Dubai.
- Ran a geo targeted lead generation workflow for Port Harcourt GRA businesses (hotels, clinics, real estate, restaurants), using places and web search to build verified contact lists for outbound Gmail campaigns.
- Tutoring one student through a six month full stack web development curriculum, from fundamentals through deployable projects.

Founder — Storevia

Earlier Venture

storevia.name.ng

- Founded Storevia, a commerce infrastructure SaaS built to give Nigerian and African sellers the tooling to run online storefronts, manage inventory, and process payments without needing separate point solutions.
- Owned product direction, technical architecture, and go to market for an earlier phase of the business before transitioning focus to CodeWithFred's client and product portfolio.

SELECTED PROJECTS AT A GLANCE

Project	Stack	Outcome
ChatPilot	Node.js, Claude API, Supabase, PM2, Vercel	AI WhatsApp agent productized and launched with a live landing page
Med Spa Booking Demos	React, config driven HTML, WhatsApp, Gmail	Two clinics closed; one progressed to a five brand platform deal
UNIPORT Student Portal	Proposal, systems architecture, AI detection	₦2.2M – ₦2.95M institutional proposal

Project	Stack	Outcome
		delivered
Crypto Portfolio Tracker	React, TypeScript, Supabase, Stripe, Paystack	In active development, targeting a Q4 beta launch
Football Predictions Platform	Supabase, Paystack, Claude API	AI prediction engine with monetized subscription model
Captain Black Catering Site	React, custom admin CMS	Live site with self service content management for the client
Scripture Projection App	Electron, React, KJV engine	Desktop tool built with a path to future SaaS productization

CONTENT CREATION

- Creator of Empire Africa (@Empire-Africa), a YouTube channel producing African business documentaries, run alongside the software practice.

TOOLING & WORKFLOW INTEGRATIONS

Runs an integrated delivery workflow across Gmail, Google Calendar, Supabase, Vercel, Figma, Cloudinary, Stripe, Apollo.io, and Canva, connecting outreach, design, and delivery into a single pipeline from client conversation to deployed product.

EDUCATION & PROFESSIONAL DEVELOPMENT

[Degree / Program, Institution Name, Year] — add your formal education details here.

Continuous, self directed study in modern full stack engineering, applied AI systems, and product commercialization, applied directly to shipped client work rather than coursework alone.

ENGAGEMENT PREFERENCES

- Open to full time roles, contract engineering, and fractional CTO work.
- Best fit for AI powered products, fintech tooling, marketplaces, or booking platforms.
- References and a full project portfolio, including live demo links, available on request.
